

TWO ENLIGHTENING EXAMPLES OF BRILLIANT PROJECTIONS.

Take it from Toshiba. The MEDIAStar series from Toshiba has two bright new stars: the TLP-770 and TLP-771,

for even more powerful presentations. Both types help you to project your ideas with 1,800 ANSI lumen, XGA resolution with 2.3 million pixels and digital progressive double scan for fantastic picture depth and optimum reproduction as in digital television. Your audience will be thrilled by its enormous luminance and brilliance. It goes without saying that both projectors continue to offer you absolutely free scope for every presentation situation.

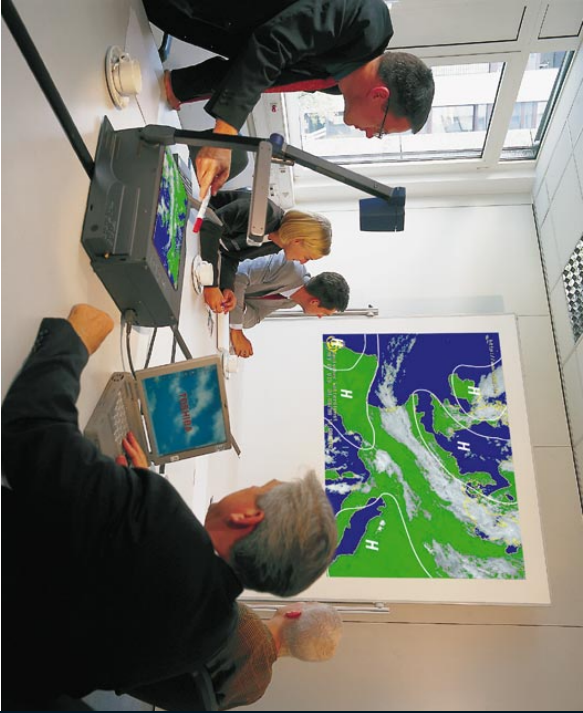

TLP-770: permanently installed, with a strongly illuminated profile for convincing presentation.

Whether data, video or top view presentation (TLP 771), the MEDIAStar is all you need. All in one. Just press a button to switch over. And the camera integrated in TLP-771 with its swivelling

camera head provides you with undreamt-of perspectives.

Digital zoom with picture-in-picture function, focus and a compact design with integrated loudspeaker are further highlights of this multi-talent.

Everything is possible with the TLP-771 and its integrated camera: from top view copies to three-dimensional objects.

LP-771 MAKES

YOUR PROJEKTION

FLEXIBLE ALL-ROUND!

TLP-771 can be turned and used as you want it. The head of the integrated, hinged camera can be swivelled through 360° to show just what you want. This means really great video conferences or model presentations for you in the future! Do you know of any other projector that can do all this? Well then!

Aspect + 3D

TLP-771's integrated, hinged and swivelling camera can be used to show just whatever you want in XGA resolution. Use coloured top views or even three-dimensional objects to project your highlights in sheer brilliance onto any wall.

DVD, video + TV

Together with the picture dimensions, the connection possibilities also ensure that TLP-770/771 can become a "Cinema projector" in next to no time. The new MEDIAStar is equipped with an S-video input, a DVD input and two audio inputs. In addition, input signals in the NTSC, PAL and SECAM formats are no problem for this machine.

PC + MAC

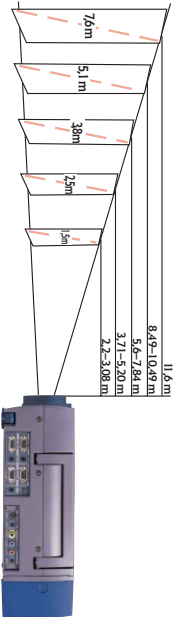

TLP-770/771 projects texts, graphs, calculation tables, pre-produced presentations and even Web-sites from the Internet larger than life onto every wall in at trade-fairs, congresses or workshops. You can present your data impressively and larger than life straight from the computer.
